

How to Install the m2eclipse Plugin

How To Install Maven m2eclipse Plugin

Note: Recent releases of Eclipse (Mar, Neon, Oxygen) already have the m2eclipse plugin installed. Only follow these steps if you don't have the plugin installed.

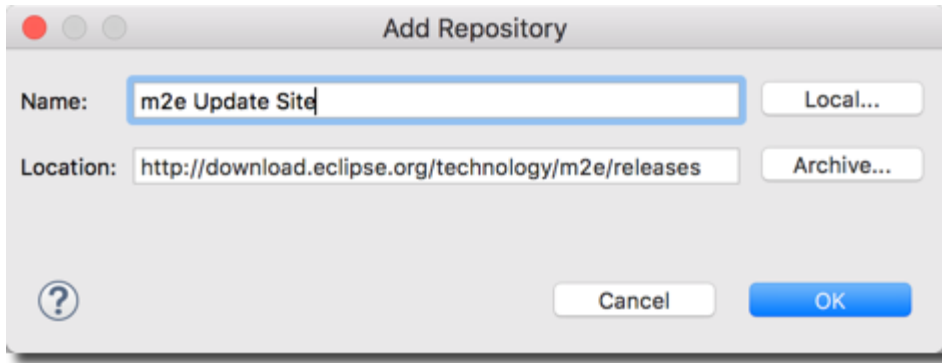

1. In Eclipse, select **Help > Install New Software**

This will display the Install dialog

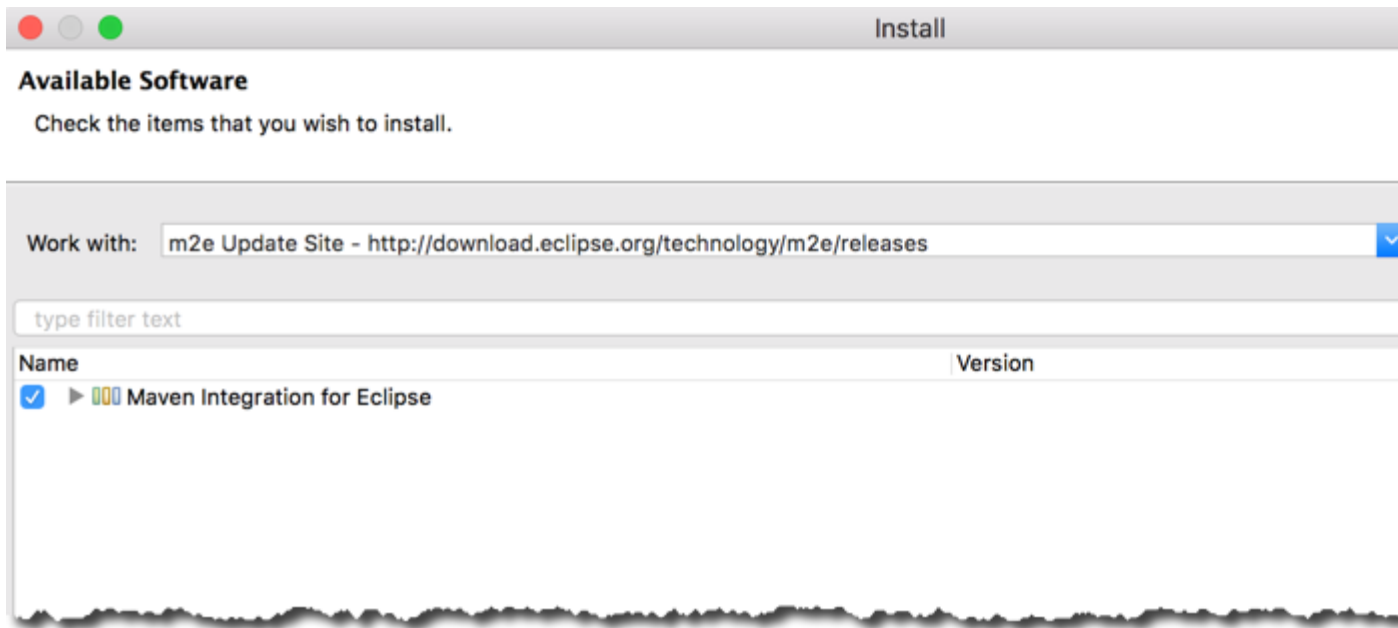

2. Click the "**Add...**" button.

3. In the dialog, enter the following from the screenshot below:

4. Wait for a couple of minutes while Eclipse fetches the files

5. In the dialog, check the box for **"Maven Integration for Eclipse"**

6. Click Next

7. It will show a dialog to review components, Click **Next**

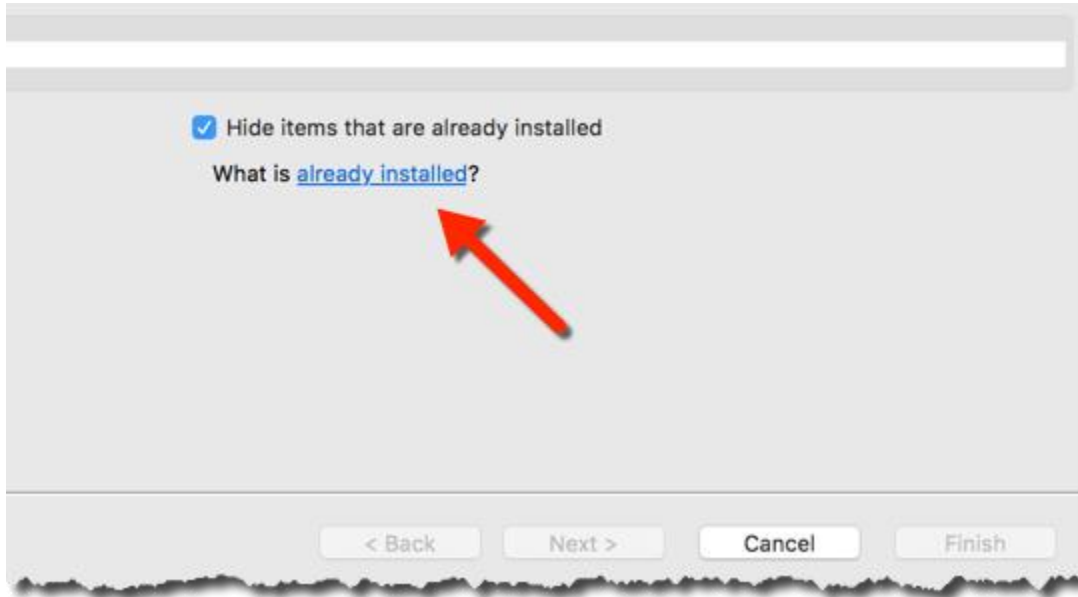

8. Accept the License Agreement, Click **Finish**

9. Once installation is complete, restart Eclipse.

Verify Installation

10. In Eclipse, select **Help > Install New Software**

11. In bottom right of dialog, you will see a blue link: **What is already installed?**

12. Click the link

13. In the dialog, filter on the text: **m2e**

14. If you see the m2e entries, then the plugin was installed successfully :-)
