

Source Files for Spring MVC + Hibernate Web App

Source Files for Spring MVC + Hibernate Web App

In the following videos, you will need to use some starter files. The starter files include SQL scripts and JAR files.

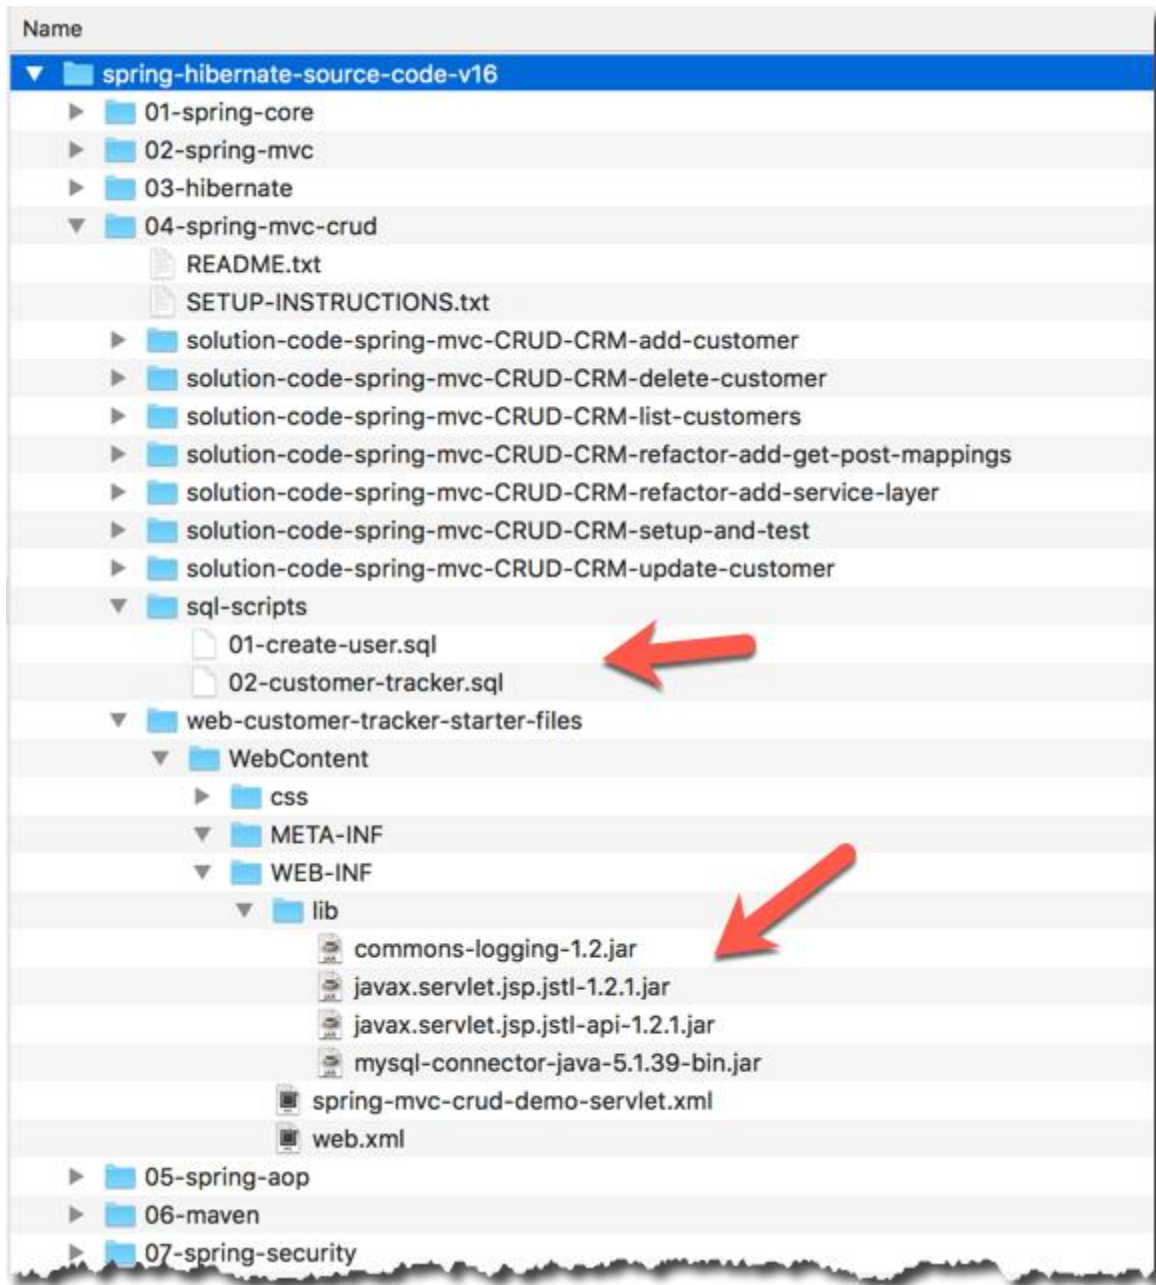

The files are attached to each video. However, if you'd like, you can also download the entire bundle.

You can download the entire source code bundle from this link:

Section 1, Lecture 5

<https://www.udemy.com/spring-hibernate-tutorial/learn/v4/t/lecture/5117038?start=0>

Once you unzip, then you'll have this directory structure.

--

Then you can find the files that I use in this directory:

spring-hibernate-source-code-vXX/04-spring-mvc-crud/sql-scripts

and

spring-hibernate-source-code-vXX/04-spring-mvc-crud/web-customer-tracker-starter-files

Regarding the JAR files, they are in

spring-hibernate-source-code-vXX/04-spring-mvc-crud/web-customer-tracker-starter-files/WebContent/WEB-INF/lib

this directory includes commons-logging, jstl and mysql jdbc driver

You will still need to add the Spring and Hibernate files separately, but we'll cover that process in later videos. I'll walk you through the process.
