

# Hibernate and Primary Keys

# Terminology

## Primary Key

**Uniquely identifies each row in a table**

**Must be a unique value**

**Cannot contain NULL values**

# MySQL - Auto Increment

```
CREATE TABLE student (  
  
    id int(11) NOT NULL AUTO_INCREMENT,  
    first_name varchar(45) DEFAULT NULL,  
    last_name varchar(45) DEFAULT NULL,  
    email varchar(45) DEFAULT NULL,  
    PRIMARY KEY (id)  
  
)
```

# Hibernate Identity - Primary Key

```
@Entity
@Table(name="student")
public class Student {

    @Id
    @Column(name="id")
    private int id;

    ...
}
```

# Hibernate Identity - Primary Key

```
@Entity
@Table(name="student")
public class Student {

    @Id
    @GeneratedValue(strategy=GenerationType.IDENTITY)
    @Column(name="id")
    private int id;

    ...
}
```

# ID Generation Strategies

Name	Description
GenerationType.AUTO	Pick an appropriate strategy for the particular database
GenerationType.IDENTITY	Assign primary keys using database identity column
GenerationType.SEQUENCE	Assign primary keys using a database sequence
GenerationType.TABLE	Assign primary keys using an underlying database table to ensure uniqueness

# Bonus Bonus

- You can define your own CUSTOM generation strategy :-)
- Create implementation of **`org.hibernate.id.IdentifierGenerator`**
- Override the method: **`public Serializable generate(...)`**
