

# Practice Activity #7 - IoC and DI with Java Configuration

## Practice Activity #7 - Inversion of Control and Dependency Injection with Java Code

*Note: In this practice activity, do not use component scanning.*

1. Create a new Coach implementation.
2. Create a new fortune service implementation (return a single hard-coded fortune)
3. Create a Java configuration class to perform IoC and DI with those classes.
4. Develop a main application to retrieve your coach implementation.
5. Test your application and verify your coach implementation is wired up as desired.

Compare your code to the solution. The solution is available here:
