Retrieving an Object
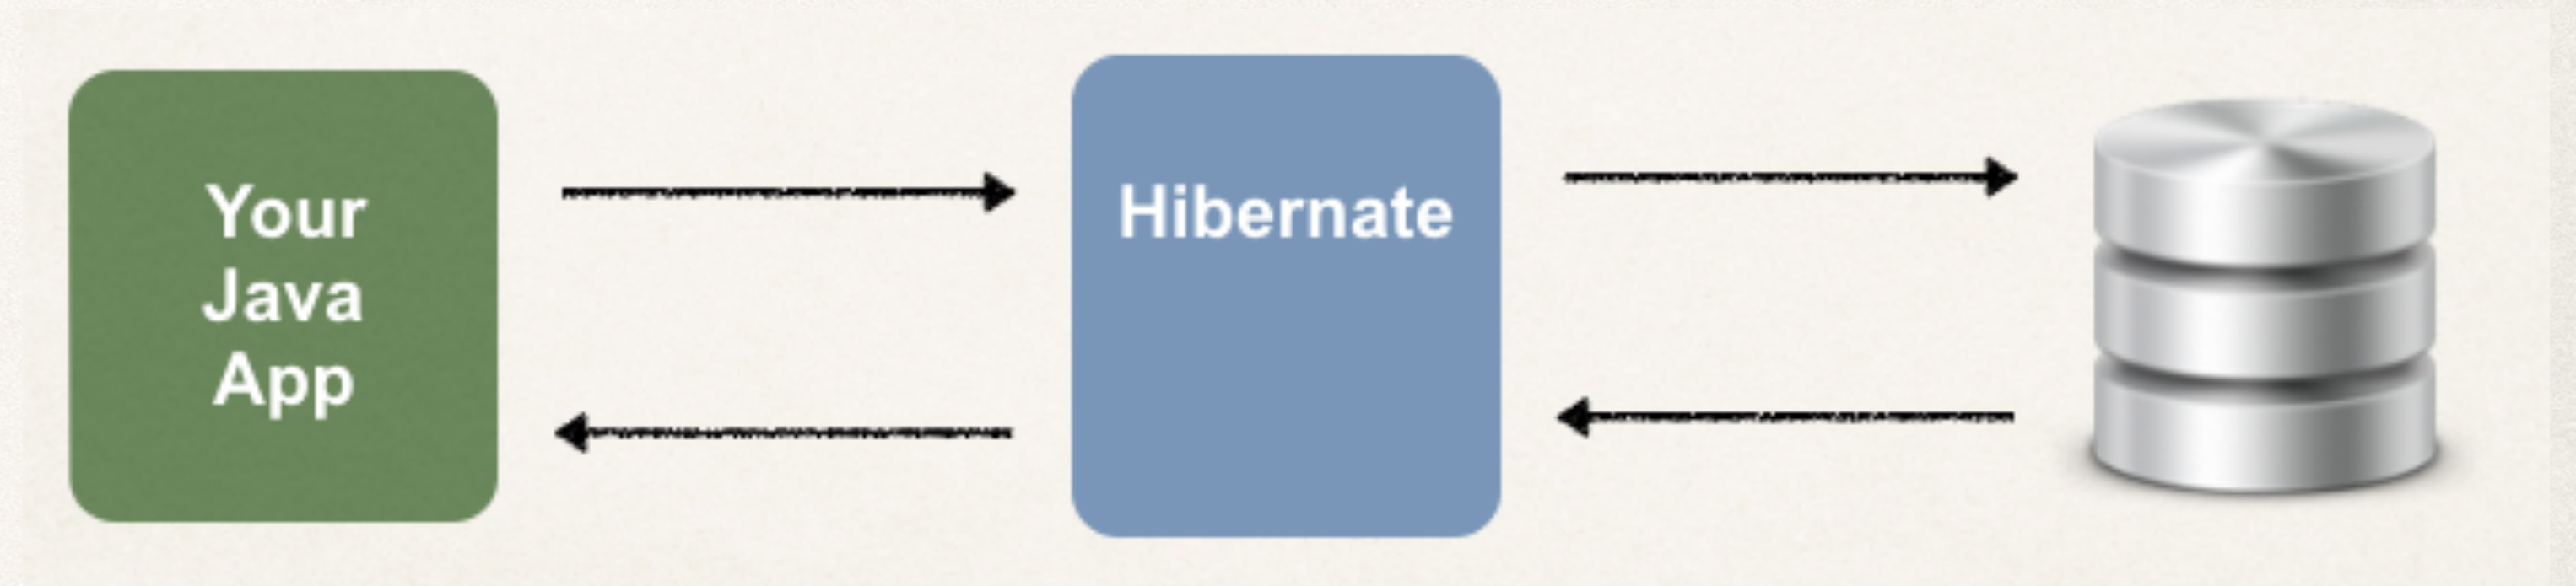

Hibernate CRUD Apps

- **C**reate objects

- **R**ead objects

- **U**pdate objects

- **D**elete objects

Retrieving a Java Object with Hibernate

```java
// create Java object
Student theStudent = new Student("Daffy", "Duck", "daffy@luv2code.com");

// save it to database
session.save(theStudent);
...

// now retrieve/read from database using the primary key
Student myStudent =
        session.get(Student.class, theStudent.getId());
```
